Claims 13, 14 and 17-27 are presented for examination.

The response filed on August 24, 2006 has been received and entered.

The 103 (a) and 102 (e) rejection based on applicant's declaration is hereby withdrawn.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 13, 14 and 17-27 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The phrase "an alpha 2 selective agonist having alpha 2B adrenergic activity" is considered to be new matter. The instant specification fails to provide support for such phrase.

Claims 13, 14 and 17-27 are rejected under 35 U.S.C. 112 first paragraph for the reasons set forth on pages 2-4 of the office action of October 7, 2005 and the following reasons. The instant specification while is enabling for treating ocular neuronal tissue from damage caused by electromagnetic irradiation of retina does not provide enablement for "protecting" ocular neuronal tissues from the damage caused by electromagnetic irradiation. Since the activity of compounds for pharmaceutical use must be determined from case to case by painstaking experimental study, one of ordinary skill in the art would be burdened with undue experimentation to determine all

alpha-2 selective agonist being capable of protecting ocular neuronal tissues from damage by electromagnetic irradiation.

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 13, 17 and 18 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1, 11 and 12 of U.S. Patent No. 5,856,329. Although the conflicting claims are not identical, they are not patentably distinct from each other because they overlap. The claims of the instant application are drawn to the use an alpha 2 selective agonist for protecting ocular neuronal tissues from damage caused by electromagnetic irradiation. The claims of the U.S. Patent are drawn to a group alpha 2 selective agonist being used for the protection of retinal optic nerve cells due to a noxious action. The claims of the instant application and the U.S. patent are an obvious variation of each other and are considered to be within the same scope.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 13, 17 and 18 are rejected under 35 U.S.C. 102 (b) as being anticipated by Wheeler et al. (U.S. Patent 5,856,329). Wheeler et al. teach the use of the claimed alpha 2 selective agonist for the protection of neuronal tissues from damage from a noxious action. See the abstract, Column 1, lines 1-10 and claim 1. The protection of neuronal damage caused by any noxious action is the inherent property of the Wheeler reference.
